

The diagram illustrates two different types of pump stations. On the left, a vertical shaft goes down into a lower level where water enters through a pipe labeled "Vedenotto". A pump labeled "Pumppu" is located at the bottom of the shaft, lifting the water up. On the right, the pump is located higher up in the shaft, and water enters through a pipe labeled "Vedenotto" at the top. Both diagrams show a concrete structure with a base layer labeled "Kiviä ja hiekkaa".
